

AER MS# 20030677

Lars-Hendrik Röller and Frode Steen

“On the Workings of a Cartel: Evidence from the Norwegian Cement Industry from 1955-1968”, *American Economic Review*, March 2006.

We have included two other files; a STATA do-file and a STATA dataset. The do-file is denoted “*cement-roller-steen.do*”, and the dataset is denoted accordingly “*cement-roller-steen.dta*”.

The do-file will generate the estimates, figures and tables in the article, except for the welfare analysis that is undertaken using Excel. All data and results necessary for the welfare analysis are however included in the dataset “*cement-steen-roller.dta*”, and in the demand results estimated in this do-file.

Detailed explanations are provided in the do-file.

Note that you have to include a path after the USE commands in order to tell STATA where the data-file is located:

use " [PATH] cement-steen-roller.dta", clear

Note also that the program saves a new dataset “*cement-roller-steen2.dta*” with variable labels that is loaded at the end of the program:

save "[PATH] cement-steen-roller2.dta", replace

To regenerate the figures the dataset is reloaded to include the full dataset, also now the path has to be included:

use [PATH] cement-steen-roller.dta, clear

Finally path is needed when we reload the saved dataset that includes variable labels at the end of the program.

use [PATH] cement-steen-roller2.dta, clear
